Used Forklift Parts

Used Parts for Forklift - Without doubt, lift truck parts will eventually wear out and require replacing. The choice of acquiring brand new parts can become pricey so one more idea is to buy used components. This can save a lot of money in the end. It is a good idea to obtain used lift truck parts that have been remanufactured. These components would guarantee that you are getting components which would work for a long time and be productive.

Worn or broken parts that are remanufactured are a very cost effective answer compared to rebuilding. With rebuilding parts, only the components which are worn out or broken get changed, which means that other wearable components might break down soon after acquisition.

Remanufacturing however provides the best assurance for used parts. Remanufactured components are taken apart and cleaned and then all wearable pieces are changed. All wearable parts are replaced regardless of age or wear which is another rationale why remanufactured components generally function so much better. Any part within the part is brand new and this offers far longer life to the second-hand part. Depending on the forklift components which are being redone, the cleaning process and the entire remanufacturing process will differ.

After complete disassembly, the engines are oven cleaned. Several parts of the engine like spark plugs, pistons, rings, valve springs, filters, and valves could be replaced during the remanufacture process. The engines are hot tested after reassembly to guarantee that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A comprehensive examination is performed in order to check for any cracks. Bearings, bushings and seals are all replaced. Typically, the replacement components used on transmission parts meet OEM specifications.

Certain lift truck components such as the alternator, the water pump, torque converters, steer axles and the starter could be quite serviceable after worn parts are replaced. The electronic control in the electric lift truck is maintained by the control card. This card could also be remanufactured with replacing all aged and worn out parts. Unlike various lift truck parts the control card can only have the worn and aged parts replaced.

Remanufactured components are comprehensively examined upon reassembly to guarantee they are in top condition prior to being sold. It is important when obtaining reproduced components to be sure they have undergone the proper testing and inspection procedures. On certain bigger components like transmissions, steer axles and engines, OEM specification replacement components should be utilized.

The dealer of used forklifts and parts can guarantee that the remanufactured components have met OEM specifications and that these parts meet industry standards. A lot of details go into remanufacturing second-hand components. This attention to detail provides more serviceability out of reproduced components opposed to the parts that were only rebuilt.
